

Sainya Krishnamurthy
Bangalore (K.A., INDIA) - 560026
Email-id : sainyakd@gmail.com
Mobile: 91+ 6361461107

Final-year CSE student specializing in agentic AI systems and LLM orchestration, with hands on experience building data driven tools and working prototypes. Currently exploring generative models, human-computer interaction, and emerging technology.

ACADEMIC DETAILS

Examination	University/School	Institute	Year	GPA/%
UnderGraduate Specialization: UnderGraduate	Computer Science and Engineering	GEU, Dehradun	2027	3.2
Graduation Specialization: Graduation	Computer Science	NPS, Bangalore	2023	72.5

TECH STACK

- **AI / ML:** LLMs(basic), Agentic AI Frameworks (LangChain, LangGraph, CrewAI), Generative Models (basics), RAG pipelines, Scikit-learn, TensorFlow, Model Evaluation
- **Creative & Prototyping:** Figma (basic), p5.js (basic), AI coding assistants (Cursor, GitHub Copilot, Claude)
- **Languages:** Python, Java, C/C++, SQL
- **APIs & Tools:** Google Maps API, Google Cloud (certified), AWS (certified), REST APIs, Git
- **Interests / Exploring:** Spatial computing (AR/VR), TouchDesigner

PROJECTS

1. **Agentic AI Project Manager**

(Guide: Mr. Sharath K.R.)

- Engineered end-to-end agentic AI prototype that autonomously generated and adapted project workflows, delivering functional demo within eight weeks and eliminating manual routing steps.
- Developed LLM driven rerouting logic that showcased generative AI's capability to replace manual decision making with priority alerts, reducing simulated project delays by 40%.
- Improved task allocation efficiency, saving 25 hours/month in manual tracking and coordination

2. **Peer to Peer Book Marketplace**

(Team Project)

- Delivered a production-ready backend over one semester as part of a 3-person team, building 15+ RESTful routes across 5 resource endpoints covering auth, book listings, wishlist, and collection management.
- Set up the database schema across 5 Supabase tables and wired up Supabase authentication for secure user login and profile management.
- Collaborated with 2 frontend teammates to ensure smooth API integration across the React/Vite client, maintaining clean request proxying between the Express server and UI layer throughout the build.

3. **Personal Portfolio Website (ongoing)**

- Building a personal portfolio across 5 sections using Next.js, Three.js, and Framer Motion with an interactive animated hero section and clean UI that reflects my identity as a creative technologist.
- Developing an MDX-powered blog launching with 1 long form post documenting my thinking on agentic AI, LLM orchestration, and emerging tech turning personal learning into a public technical voice
- Handling the full build independently from component architecture to deployment on Vercel with live embedded demos of projects so visitors can interact with working prototypes directly in the browser.

PORTFOLIOS AND DEMO

- GitHub: github.com/sainyakris — includes live demos of listed projects and portfolio
- Google Cloud: credly.com/users/sainya-krishnamurthy | AWS: <https://shorturl.at/V4rXr>
- LinkedIn: linkedin.com/in/sainyakd

INTEREST AND HOBBIES

- Singing
- Fashion Illustration
- Animation and Sketching.
